MODEL TVR-202S

Video Cassette Recorder

SERVICE MANUAL

INTRODUCTION

This manual provides service information for our VHS Video Cassette Recorder. It describes the principles and adjustments of mechanical and electrical operation for this model.

Service procedures given herein cover only field maintenance services. Adjustments which require high-level instruments, jigs, and techniques are excluded since they should be performed at the factory.

Due to design modifications, the servicing procedures and data given in this manual are subject to possible change without prior notice.

IMPORTANT SAFETY PRECAUTION

Prior to shipment from the factory, our products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

PRECAUTIONS DURING SERVICING

1. Parts identified by the \triangle symbol are critical for safety. Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.
Examples: RF converters, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
 - Wires covered with PVC tubing
 - Double insulated wires
 - High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
 - Insulation tape
 - PVC tubing
 - Spacers
 - Insulation sheets for transistors
5. When replacing AC primary side components (transformers, power cords, etc.), wrap ends of wires securely on the terminals before soldering.
6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. When a power cord has been replaced, check that force (maximum applied force should be 20-30 lbs.) in any direction will not loosen it.
9. Also check areas surrounding repaired locations.
10. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside of unit.

SAFETY CHECK AFTER SERVICING

1. Insulation resistance test

Confirm specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, video and output terminals, etc.).

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio output terminals, etc.).

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance.

ELECTRICAL ADJUSTMENT

1. PLAYBACK SWITCHING POINT ADJUSTMENT

- Mode** : PLAY
- Test Signal** : TPS-13(S) or 13S
- Check Point** : FIP
- Adjustment Point** : CH UP/DOWN (▲/▼) KEY
- Adjustment** :
- (1) Solder a 30cm long piece of lead to the PG-TP at the back of the Main PCB (Figure 1 below) and wind it round the back. (Take care not to short circuit nearby components.)
 - (2) Playback the test tape and allow the automatic ATR to finish.
 - (3) Connect the lead attached in step (1) to the Tuner (ETA01) earth line. (Make sure that the lead can not come loose.)
 - (4) Adjust the display for FIP (H701) with the CH UP/DOWN (▲/▼) keys until it is as shown in Figure 2 Display B below.
 - (5) Remove the lead.

- ⑥ A/C Head tilt adjustment screw
- ⑦ RG Post height adjustment screw

1. MECHANISM CONTROL

The mechanism includes its own mode as well as the operation mode of the VCR as shown in the chart below. This mode serves an important function in working to protect the tape by passing through the VCR when the mode is switched over.

The movement of the mechanism mode is performed by the control signal of the loading motor's rotary control circuit. With this control, the operation mode position is detected by the Mode switch (4-bit mode data output), Cassette In switch, tape top sensor and the tape end sensor which detects all modes of the mechanism.

1-1. MODE SW

The composition of the 4 terminals, COM DATA 1, 2, 3, 4, are treated as a 4 bit signal.

POSITION NO	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23

1-2. CONFIGURATION OF THE TN6500 VCR MECHANISM

1-2-1. Cassette Drive Mechanism

The cassette is loaded and ejected via the drive from the capstan motor.

(A) Detection of cassette insertion

When an cassette is inserted, the capstan motor starts and simultaneously causes the shutter on the main unit to break the light beam of the Tape Top Sensor. This capstan FG pulse and the Tape Top Sensor change cause the cassette to be pulled into the VCR.

(B) Detection of completed cassette insertion operation

This is detected by the Cassette Insertion Switch that is linked to the actuator activated when a cassette is inserted.

Note: The Cassette Insertion Switch is not included with the deck mechanism.

(C) Detection of completed cassette ejection operation

As above, this is detected by the shutter on the shutter detecting the change in the Tape Top Sensor. The light beam that is broken by cassette insertion/ejection is restored when the cassette has been ejected.

1-2-2. Tape Loading Mechanism

Tape loading mechanism is the mechanism that is loaded with the tape loading motor linked to the mode switch. The following actions occur when the 4-bit position code output from the mode detection switch is used.

(A) The tape is pulled out of the cassette and wound on the cylinder. (tape loading)

(B) The tape is returned to the cassette. (tape unloading)

(C) Function are switched so that each mechanism can operate.

1-2-3. Tape Transportation Mechanism

The tape is fed through the VCR by the action of the capstan, pinch roller and reel drive.

1-2-4. Motor

(A) Capstan Motor

The drives the capstan axle directly and also drives the reel that has been loaded on the belt. This motor is also used to drive the cassette loading mechanism.

(B) Tape Loading Motor

In addition to cassette loading/unloading, this motor also switched between the various operating modes(PLAY, FF/REW etc.)

(C) Cylinder Motor

Connected to the rotating head drum and drives the rotating head.

1-2-5. Safety Tab Sensor/Actuator

This actuator detects the tab that operates the REC SAFETY switch.

Note: This mechanism does not include the switch.

1-2-6. Mode Sensor Switch

This detects the 4-bit code before each position and is connected to the tape loading mechanism.

1-2-7. Take-up/Supply Reel Sensor Photoelectric Cell

A luminous diode and phototransistor at the fixed position for the cell comprise the reel sensor. (Pulse rate=8pulses/rotation)

Note: This mechanism does not include the luminous diode or the phototransistor.

1-2-8. Tape Start/End Sensor Photoelectric Cell

A luminous diode and phototransistor at the fixed position for the cell comprise the start/end sensor. (Pulse rate=8pulses/rotation)

Note: This mechanism does not include the luminous diode or the phototransistor.

2. ADJUSTMENT OF BT TORQUE IN PLAY MODE (ADJUSTMENT OF THE TENSION ARM POSITON)

1. Remove the FL Ass'y.
2. Rotate the loading pulley with your finger until PLAY mode is reached.
3. Insert a standard screwdriver into the BT adjustment groove (a or b) of the main chassis.
Twist the screwdriver left and right to adjust gap(A) and gap(B) so that they are the same.

- To reduce the gap (BT torque reduction), insert into adjustment groove "a" and twist counter-clockwise as shown in the figure below.
- To increase the gap (BT torque increase), insert into adjustment groove "b" and twist clockwise as shown in the figure below.

CAUTION: Do not twist at too much of an angle. Doing so will have adverse effects on other areas as well.

3. AUDIO/CTL HEAD

3-1. TAPE TRANSPORT ADJUSTMENT

Audio/CTL Head Adjustment

1. Using an ordinary cassette tape, set to CUE mode.
2. Turn screw ③ and adjust for smooth transport at the take-up guide.

3-2. AUDIO/CTL HEAD HEIGHT AND AZIMUTH ADJUSTMENT

1. Connect the noise meter to the audio output.
2. Play the test tape (1 KHz color bar signal), turn nut ④ back and forth a little at a time to set maximum audio output level. (Rotate in a clockwise direction to adjust the settings.)
3. Play the test tape, (8 KHz stair step signal), turn screw ⑤ back and forth a little at a time to adjust the azimuth so that the audio output level will reach a maximum.
4. Play the test tape (1 KHz color bar signal), and make sure that there is no significant change in the audio output level. If a large change remains, turn screw ③ back and forth a little at a time to adjust so that the level change will reach a minimum.
5. When all adjustment is finished, lock up screw ⑥.

4. TAPE TRANSPORT SYSTEM CHECKS AND ADJUSTMENT

The tape transport system has been precisely aligned at the factory and normally does not require readjustment. The following steps are therefore necessary only in cases of frequent use or when replacing parts which have an effect on the tape transport system.

4-1. TAPE TRANSPORT CHECK

1. Using an ordinary cassette tape, switch back and forth between PLAY and STOP modes several times.
2. During PLAY mode, observe the input and output portions of the tape (A and B in the figure below) of the head drum lead. Confirm that the tape slips neither upward nor downward with respect to the lead as shown in Figure "Drum Lead Check-1".

Tape Transport Check

Drum Lead Check-1

NOTES:

1. If the tape slips upward; sound is produced by contact between the tip of rotating heads and the edge of the tape.
2. If the tape slips downward; the tape curls or wrinkles (or makes noise) at its connection with the lead face of the drum lead.
3. During loading, play, and unloading of the cassette tape, observe the tape at the supply guide roller, and take-up guide roller.
4. Make sure that there are no curls or wrinkles as shown in the figure below.

Guide Roller

5. Observe the tape as it wraps around the drum during PLAY and separates from the drum during STOP.
6. As shown in the figure below, make sure that there is no damage to C and D and that there is no contact noise between the head tips and tape edge.

Drum Lead Check-2

7. If a defect is detected during check, perform the following procedure for adjusting Guide Roller height.

4-2. GUIDE ROLLER HEIGHT ADJUSTMENT

1. Slightly loosen the tight-screw of the supply and take-up guide rollers as shown in the figure below.
2. Using an ordinary cassette tape, set to PLAY mode.
3. With a standard screwdriver, slightly turn the supply guide roller (no more than 180° at a time), and adjust so that at the drum input portion, the tape travels smoothly along the drum lead without slipping upwards or downwards.
4. Similarly, adjust the take-up roller for the drum output.

Adjusting Guide Roller Height

NOTES:

1. Loosen the tight-screw only enough to allow the guide rollers to be rotated. Loosening it anymore than that may rotate the roller inadvertently as a result of tape motion.
2. Rotate the roller carefully to avoid damage to the tape.
3. When the adjustment is completed, tighten the screw and set by locking up the screw.

4-3. TAPE TRANSPORT CHECK AT THE TAKE-UP GUIDE

In general, no adjustment will be necessary for the take-up guide. However, adjustments or checks will be necessary when replacing the Audio/CTL Head or parts affecting the tape transport system after a long period of operation.

1. Using an ordinary cassette tape, set to PLAY mode.
2. Turn Audio/CTL Head screw © as shown in the figure below and adjust for smooth transport at the take-up guide as shown in Figure "Guide Roller" on page MA-5.

Take Up Guide Roller

5. INTERCHANGEABILITY ADJUSTMENT

Before using the test tape, make sure that the tape transport is normal using an ordinary cassette tape. Also, make sure that the switching point (Refer to EA) is adjusted. If they are not, do the following checks after adjusting.

5-1. PRELIMINARY CHECKS

1. FM Envelope Waveform Check

1. Connect the CH-1 oscilloscope to TP of PB ENV and CH-2 to TP of CTL. At this time, trigger the oscilloscope externally with the signal (RF Switching Pulse) from TP of RFS.
2. Play the test tape (Stairstep).
3. Use the Channel ▼/▲ buttons to tune the tracking to center position. Adjust point ④ (X value adjustment point: test point reference P.MA-1) so that the FM envelope output at TP of PB ENV reaches a maximum.

4. Using the Channel ▼/▲ buttons. Perform the following 3 steps (5-7) by moving the TP of CTL waveform in both positive (+) and negative (-) directions in 3 ms increments.
5. Refer to the figure below. Read the level of portion (a) of the waveform. If the waveform is serrated at point (a), adjust the level so that the serrations are as smooth as possible (refer to the second figure).

FM Waveform (Maximum Output)

Normal Waveform Examples

6. As shown in the equation below, read the FM waveform value at point (b) and make sure that:

$$\frac{b}{a} \geq 0.75 \text{ or } 20 \log \frac{b}{a} \geq -2.5 \text{ dB}$$

7. Read the values at points (c) and (d) [drum input and output] and make sure that:

$$\frac{c}{a} \geq 0.75 \text{ and } \frac{d}{a} \geq 0.75 \text{ or}$$

$$20 \log \frac{c}{a} = -2.5 \text{ dB and}$$

$$20 \log \frac{e}{a} = -2.5 \text{ dB}$$

NOTES:

1. Read the minimum levels for (b), (c), and (d).
2. If above checks yield normal results, proceed to page MA-8 section "ADJUSTMENT".
3. If defects are noted, perform the following FM envelope waveform adjustment.

2. FM ENVELOPE WAVEFORM ADJUSTMENT

1. As in the previous section, observe the FM waveform and press the CHANNEL ▼ / ▲ buttons. Waveform alterations must be nearly parallel to each other as shown in Figure "Normal Waveform Examples" on page MA-7.
2. If the waveform changes as shown in the figure below, adjustment is necessary.

Abnormal Waveform Example

5-2. ADJUSTMENT

1. Connect the TP of PB ENV to the oscilloscope CH-1. At this time, trigger the oscilloscope externally with the signal (RF Switching Pulse) from TP of RFS.
2. Play the test tape (Stairstep).

1. DRUM INPUT ADJUSTMENT

1. Observe the FM envelope output wave at the TP of PB ENV with the oscilloscope and press the CHANNEL ▼ / ▲ buttons in both positive (+) and negative (-) directions.
2. A of the following figure shows incorrect waveforms. With a standard screwdriver, adjust the transport guide roller to flatten the peak of the FM envelope waveform as shown in B.

NOTES:

1. If the guide roller rotates freely, tighten the screw slightly.
2. Be sure to adjust the guide roller only by small increments at a time to avoid damaging the test tape.

In addition to observing the waveform, make sure that there is no slipping of the tape or curling at the drum lead.

Drum Input Adjustment

2. DRUM OUTPUT ADJUSTMENT

1. Adjust the take-up guide roller so that the FM envelope output flattens as shown in D of the figure below.

Drum Output Adjustment

2. If the tape separates from the guide or wrinkling occurs at the take-up guide, adjust by turning screw ③ of the Audio/CTL Head as shown in the figure below.

Take-up Guide

3. As shown in the figure below, adjust screws ③ and ② and nut ① to align the Audio/CTL Head height with the tape.

Audio/CTL Head Height

NOTES:

1. Fine adjustments are not required at this time. It is sufficient if the tape is engaged with the guide and that the servo operates properly (control signal picked up).
2. If the tape separates from the take-up guide or wrinkling occurs, screw ③ must have been excessively tightened with respect to screw ① and screw ②, which is causing the Audio/CTL Head to incline forward or backward. Use care in adjusting screws ② and ③, and screw ① evenly and observe that wrinkles are not produced at the take-up guide.

5-3. INTERCHANGEABILITY ADJUSTMENT

1. Observe the FM envelope output waveform at the oscilloscope and press to adjust the CHANNEL ▼ / ▲ buttons in both positive(+) and negative(-) directions.

Minimum FM Output (Incorrect Examples)

2. If there are waveforms as shown in A or B in the above figure, adjust the supply guide roller height so that the waveform appears as shown by E, F, or G in the figure below. At this time, if the waveform fluctuates, adjust to the point of minimum fluctuation.

Minimum FM Output (Correct Examples)

3. If the FM waveform appears as shown by C or D in the above figure, adjust the take-up guide roller height to obtain a waveform such as shown in E, F, or G.

At this time, if the waveform fluctuates, adjust to the point of minimum fluctuation.

4. Vary the tracking control from maximum to minimum FM output.

Perform fine adjustment of supply and take-up guide rollers so that waveform variation appears as shown in E, F, or G.

5-4. AUDIO/CTL HEAD HEIGHT, AZIMUTH AND SLANT

Refer to 3-2 (MA-5) for details regarding audio/CTL head height and azimuth.

5-5. SETSCREW TIGHTENING

1. Check for maximum FM output waveform, maximum audio output, and be sure that there is no wrinkling on the tape or other transport irregularities. When finished, secure the guide rollers. (This must be performed in STOP mode.)
2. Because the guide rollers are easily moved, use care when securing.
3. After tightening the screws, perform the final interchangeability check.

5-6. FINAL INTERCHANGEABILITY CHECK

Perform preliminary checks referring to section "PRELIMINARY CHECKS" on page MA-6.

6. FRONT LOADING ASSEMBLY ATTACHMENT

To attach the Front Loading Assembly, follow the procedures below.

- 1) Twist the loading motor with your finger until it is in EJECT mode.
- 2) Twist the FD Pinion Gear counterclockwise until it stops. (The FD Face Gear is loose.)
- 3) Twist the FD face Gear counterclockwise until it stops, then apply gentle pressure in the counterclockwise direction.
- 4) In the position at step 2) , rotate the FD Pinion Gear clockwise. After about 3 1/2 turns, the FD Pinion Gear should begin to interlock with the FD Relay Gear. Now twist the FD Pinion Gear until it stops. (The assembly should now resemble Fig. 2)
- 5) Twist the FD Pinion Gear about 1/3 of a turn counterclockwise so that the Lift Gear R attachment position is horizontal making attachment easier, as shown in Fig. 3. Also, the FD Relay Gear and FD Face Gear eye marks should be aligned when the MD is viewed from the back. (Fig. 4)
- 6) Attach the front assembly.
Insert the first Lift Gear R between the first and second gear of the front assembly. (Fig. 3)

Note: Do not touch the CSP plate of the Front Loading Assembly. (Take care not to distort it.)

7. RG POST HEIGHT ADJUSTMENT

- 1) Use a blank tape and set the VCR to REV mode.
- 2) Twist screw E and adjust the RG Post height until the tape is aligned with the lower winding plunger.

PERIODIC MAINTENANCE

The following procedures are recommended for maintaining optimum performance and reliability of this video cassette recorder.

CLEANING

For cleaning, use a lint-free cloth or gauze dampened with alcohol.

TAPE TRANSPORT SYSTEM

1. The following components should be cleaned after every 500 hours of use.
 - Impedance Roller
 - Tension Post
 - Transport Slide Post
 - Supply Guide Roller
 - Take-up Slide Post
 - Take-up Guide Roller
 - Video Head & Drum System
 - Drum Ground
 - Drum Motor Shaft
 - Audio/CTL Head
 - Pinch Roller
 - Capstan
 - Reverse Guide Post
 - Full Erase Head
 - Tape Guide
 - F Post
2. Since the above parts come in direct contact with video tape, they tend to collect dust particles. If allowed to accumulate, dust may lead to damage to the video tape and above parts.
3. After cleaning with alcohol, allow the parts to dry thoroughly before using a cassette tape.

NOTE:

- When cleaning the two video heads on the upper drum, do not clean them with a vertical stroke.
- Use only a gentle back and forth motion in the direction of the tape path.

REEL DRIVE SYSTEM

1. The following components should be cleaned after every 1000 hours of use.

TOP

- Take-up Reel Table Ass'y
- Supply Reel Table Ass'y
- T Soft Brake Ass'y
- T Main Brake Ass'y
- S Main Brake Ass'y
- BT Band Ass'y

BOTTOM

- Capstan Motor Pulley
- Clutch Pulley
- Drive Belt
- C Brake

2. The above revolving parts are of rubber or come in direct contact with rubber parts. Dust on rubber accumulates and interferes with proper operation.
3. Avoid using excessive alcohol when cleaning rubber parts.

SERVICE SCHEDULE FOR MAIN COMPONENTS

The following table lists the parts which should receive periodic servicing at the recommended intervals.

59275

Name	Periodic Service Schedule (operating hours)					Part No.
	1000	2000	3000	4000	5000	
Cylinder Ass'y	○	●	○	●	○	62D806601601
Clutch Ass'y		●		●		62D806509302
Drive Belt		●		●		62D80650920
BT Band Ass'y		●		●		62D806508303
Soft Brake Ass'y		●		●		62D806510303
T Main Brake Ass'y		●		●		62D806510301
S Main Brake Ass'y		●		●		62D806510302
Pinch Roller Arm Ass'y		●		●		62D806506301
Audio/CTL Head			●			62D62041520
T Reel Ass'y			○			62D806505301
S Reel Ass'y			○			62D806505302
Capstan Motor Ass'y			○			62D60030360
Loading Motor Ass'y			○			62D806511303

Standard Service Periods

- Check and replace if necessary
● Replace

NOTE:

Cleaning and replacement of the belts should be undertaken every 2 years even if the unit is not used frequently.

2. TERMINOLOGY REFERENCE

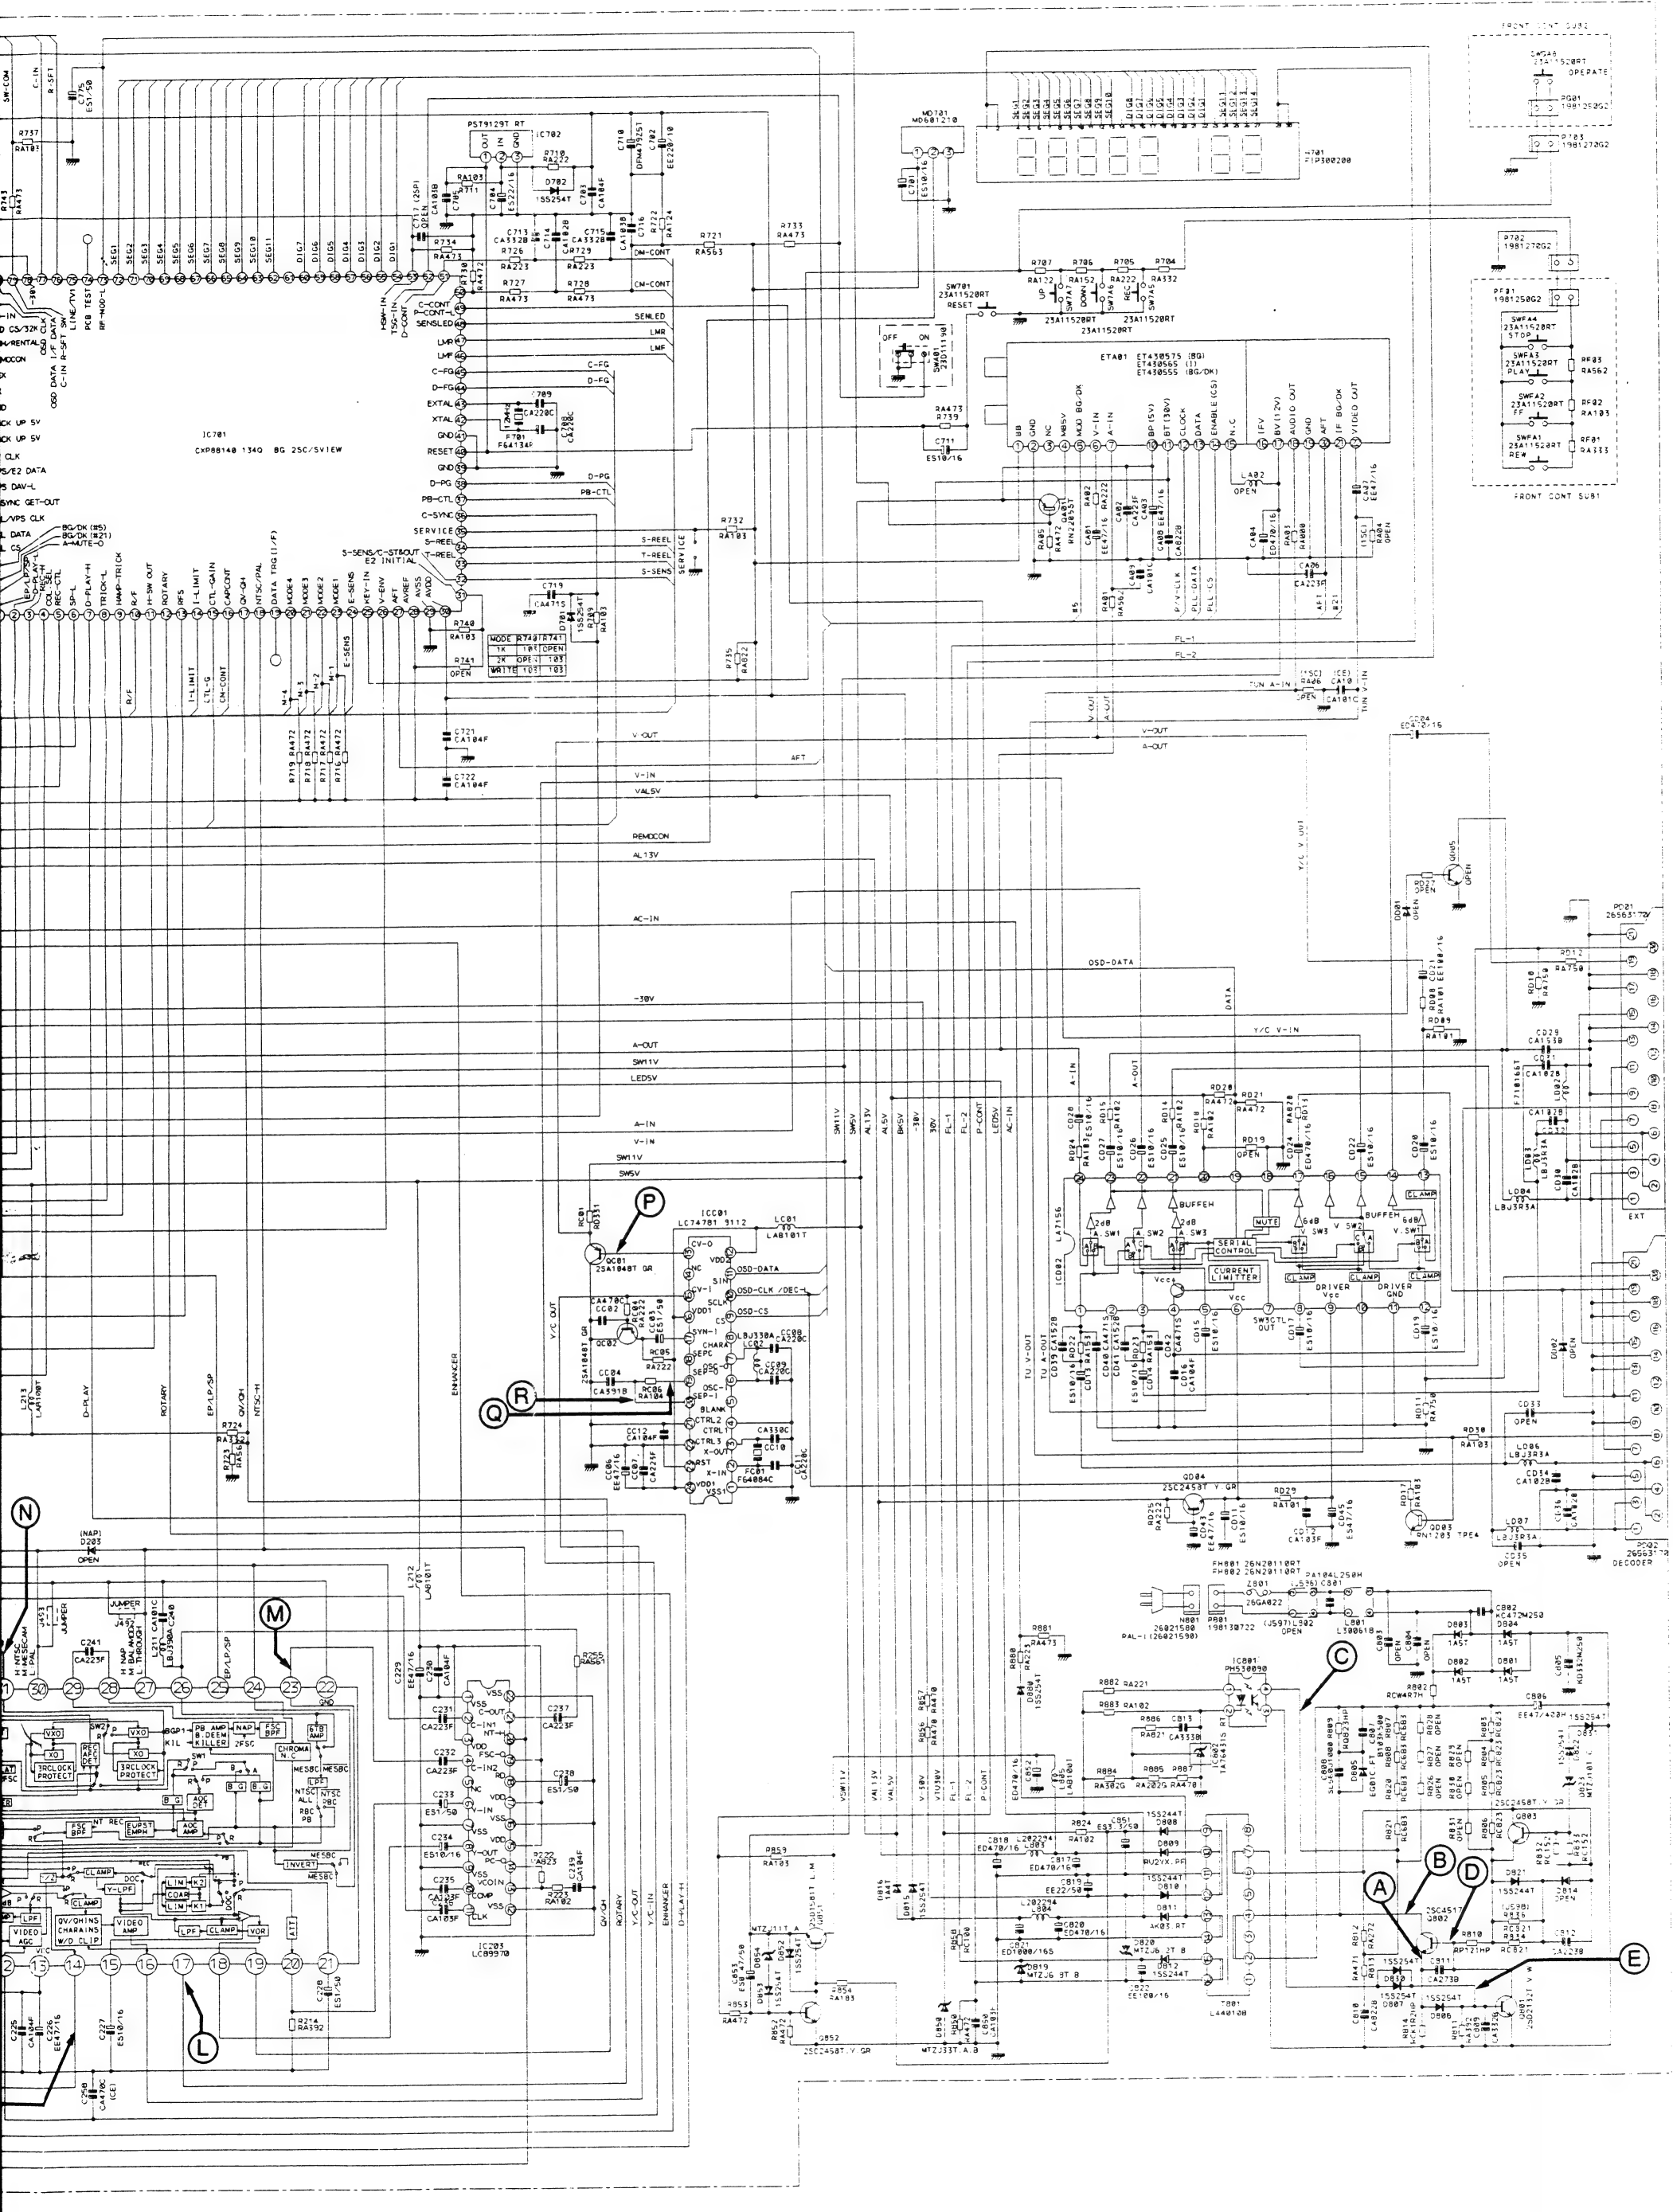

The following terms have been changed as a result of the use of a new CAD system.

Description	Ref. No.	CAD Code
♦ IC	IC101	LA3373, MT No Connection Description (LA3373) Circuit Ref. Number Head Name
♦ Transistor	Q101	2SC2785T, E. F Rank No Connection Description (2SC2785) Circuit Ref. Number Head Name
♦ Diode	D101	1S2835T No Connection Description (1S2835) Circuit Ref. Number Head Name
♦ Resistor	R101	RC102F Tolerance F: $\pm 1\%$ G: $\pm 2\%$ J: $\pm 5\%$ (No Mark) K: $\pm 10\%$ M: $\pm 20\%$ H: No Connection Resistance ($10 \times 10^2 = 1000$ ohms) Carbon Resistor 1/6W Circuit Ref. Number Head Name
	R102	RA1R1 Resistance (1.1 ohm) Decimal Point Mark Chip Resistor 2125 Type 1/10W
♦ Capacitor (Chip)	C101	CA200C Temperature Characteristic C: CH, CJ, CK U: UJ S: SL B: B D: D Capacitance ($20 \times 10^0 = 20$ pF) Chip Capacitor 2125 Type Circuit Ref. Number Head Name
♦ Capacitor (Ceramic)	C101	SL1R5H or S or Z No Connection Capacitance (1.5 pF) Decimal Point Mark Characteristic (Ceramic SL)
♦ Capacitor (Electrolytic)	C101	ES1/50H or F or Z No Connection Voltage Proof (50V) Capacitance (1 μ F) Electrolytic SSM Type
♦ Hybrid IC	IC102	HIC***** Code No. (3 ~ 8 Column \rightarrow 11*****0)
♦ CR Component	CR101	CR***** Code No. (3 ~ 8 Column \rightarrow 11*****0)
♦ In-Line Block	IB101	IB***** Code No. (3 ~ 8 Column \rightarrow 11*****0)
♦ Surge Absorber	D102	Z***** Code No. (3 ~ 8 Column \rightarrow 13*****0)
♦ LED	LD101	LED***** Code No. (3 ~ 8 Column \rightarrow 14*****0)
♦ LCD	H101	LCD***** Code No. (3 ~ 8 Column \rightarrow 14*****0)
♦ FIP	H102	FIP***** Code No. (3 ~ 8 Column \rightarrow 14*****0)
♦ Pilot Lamp	PL101	PL***** Code No. (3 ~ 8 Column \rightarrow 14*****0)
♦ Neon Bulb	NE101	NE***** Code No. (3 ~ 8 Column \rightarrow 14*****0)
♦ Trimmer Cap.	C102	CT***** Code No. (5 ~ 9 Column \rightarrow 1591*****)
♦ CFC Assy	C103	CFC***** Code No. (5 ~ 9 Column \rightarrow 1501*****)
♦ Coil	L101	L***** Code No. (3 ~ 8 Column \rightarrow 17*****0)
♦ Filter	F101	F***** Code No. (3 ~ 8 Column \rightarrow 17*****0)

PC BOARD ASS'Y (SUB-1)

PC BOARD ASS'Y (SUB-2)

6. REMOVAL OF THE DECK MECHANISM

6-1. REMOVING THE TOP COVER AND FP ASSY

- ① Remove the four screws.
- ② Remove the Top Cover.
- ③ Remove the FP Assy, held in position by the eight prongs, the direction of arrow.
- ④ Remove the Bracket.

* Attach the Face Plate with the Dust Cover pushed open.

6-2. REMOVING THE DECK MECHANISM

- ⑤ Disconnect the Flexible Wire 9P from the Head Amp Unit.
- ⑥ Disconnect the Connector (N401) from the Deck Mechanism.
- ⑦ Remove three screws.
- ⑧ Remove the Deck Mechanism.

* When handling the Deck Mechanism, take care not to touch the cylinder head.

7. BRIEF SERVICE INSTRUCTION

7-1. REMOVING THE MAIN PCB

- Remove the Deck Mechanism as described in steps 1-1 and 1-2 of 1. REMOVAL OF THE DECK MECHANISM.

- ① Remove the two screws.
- ② Disconnect the Power Cord from the chassis.
- ③ Remove the Main PCB from the three prongs on the chassis. (Do not hold the Tuner when removing the Main PCB.) Remove the Sub PCB, if one is attached, from the Main PCB.

7-2. INSTALLING THE DECK MECHANISM FOR BRIEF OPERATION

- ① Attach the Deck Mechanism to the Main PCB removed from the chassis.
- ② Fix the two spacers of the Deck Mechanism to the back of the Main PCB with screws.
- ③ Attach the (N401) Connector to the Deck Mechanism.
- ④ Attach the 9P Flexible Wire to the Head Amp Unit.
